

# Input/Output (IO)

## OrxFile

File / file system module. Module that handles file / file system access.

## OrxInput

Input module. Module that handles generalized inputs (keyboard, mouse, joystick, ...)

Input events may be defined either in the config file or in code with `orxInput_Bind*`() functions. They can be changed on the fly, of course, and you can create inputs than don't necessarily map to physical device by using the `orxINPUT_TYPE_EXTERNAL` value of the enum.

It allows to group everything through the generic input system. Events can be bound to whatever any input source: physical device, GUI "buttons" by activating the input using `orxInput_SetValue()`, etc... This way, when going from one peripheral to the other, or when going to another platform, only the bindings need to be changed, the processing code itself doesn't change.

## OrxJoystick

Joystick plugin module. Plugin module that handles joystick-like peripherals.

## OrxKeyboard

Keyboard plugin module. Plugin module that handles keyboard peripherals.

## OrxMouse

Mouse plugin module. Plugin module that handles mouse-like peripherals.

## Config
