Keyboard Inputs

There have been many tutorials and examples covered already on using the keyboard for input. These are listed here for your convenience:

- Keyboard Inputs
- Detecting Keyboard Key Up
- Part 10 of the Beginner's Tutorial - Input Controls

Config

The full list of keys that can be used in your config is listed here.

Getting a key display name

You can retrieve the display name for a key using orxKeyboard_GetKeyDisplayName. This is very handy for pulling in your defined key inputs from your config, and displaying them in your UI. For example:

```
const orxSTRING keyName =
orxKeyboard_GetKeyDisplayName(orxKEYBOARD_KEY_SPACE);
```

In the above code, if orxKEYBOARD_KEY_SPACE is passed, the resulting string is SPACE.
