

# This port is deprecated, use (non-native android)

This tutorial assumes that you already have successfully installed latest Android SDK and NDK. This tutorial explains how to build orx for android 2.3 and up using NativeActivity

## 1. Clone orx repository

```
cd <MY_LIBS>
hg clone https://bitbucket.org/orx/orx
```

## 2. Compile orx

```
cd <MY_LIBS>/orx/code/build/android-native
export NDK_MODULE_PATH=<MY_LIBS>
ndk-build
./install.sh
```

## 3. Compile orxTest sample

```
cd <MY_LIBS>/orx/code/demo/android-native
export NDK_MODULE_PATH=<MY_LIBS>
ndk-build
```

## 4. Import project in Eclipse

```
Import an existing project into Workspace
browse to <MY_LIBS>/orx/code/demo/android-native
let eclipse build the project and deploy on your device
```
